

Building Construction II

1/2 Credit

Semester

11,12

This course builds on the information learned in Building Construction I. The course will still focus on residential construction but will require more in-depth and higher level projects. Students will learn advanced framing techniques, concrete, masonry, finish construction and more skills and tools used on the typical construction site. The class will be sheds/small garages for people in the community as their final project. This course will also help a person to continue developing basic home improvement and maintenance skills.

Prerequisites: Building Construction I and must be a junior or senior.
