

Cabinetmaking I

½ Credit

Semester

11,12

Cabinetmaking is a course designed to further develop woodworking skills and knowledge beyond the basic processes of woodworking. Students will learn more extensive methods of material processing, joinery, laminating and wood finishing. Using an existing plan, students will make a cabinet project that will require them to apply these more extensive skills and have a product of high quality as the course outcome.

Prerequisites: Wood Technology or consent of instructor required.
