Woods Technology

<u>½ Credit</u>   <u>Semester</u>   <u>10,11,12</u>

This course has been designed to introduce the student to the basics of wood and woodworking. Students will use and understand the terminology, materials, tools, equipment, and methods of working with wood on an introductory basis. Students will learn these basic skills through a variety of hands-on projects throughout the semester, covering proper machine use, squaring rough lumber, joinery, laminating, problem solving, the design process, and lathe work. There is a lab fee that will be charged for project materials.
